

Brain Warmup

We can use a different method. We can make zip files of folders with large size beforehand and store it in hard disk and other folders instantly. In this way,

- One can download without taking much time since large folders are zipped beforehand and it doesn't take much time to zip small folders.
- Since not all folders are zipped it doesn't take too much space in hard disk.
- If some of the contents of a course are changed, the zip files of large folders which contain the changes should be replaced with new zipped folders of those large folders. There won't be many large folders so we don't have to make many changes.

We should select a certain size as threshold size above which are large folders and below which are small folders. The threshold size should be selected in such a way that it doesn't take too much time or too much space.
